Simran Sheth
CPSC 499 Senior Project Part II
Progress Report – March 25, 2019

What I planned to do:
- I want to figure out an algorithm for choosing users and volunteers
- At the least, have some UI pages ready to code later
- Finish current location

How it went:
- I finished the current location pointer on google maps.
- I made some UI pages ready
- I also made a page ready for donations

What I learned:
- Stack Exchange is my best friend
- ASUS tablet is a bad one

What issues I ran into:
- ASUS tablet gave me a lot of troubles – will elaborate in meeting
- Emulator does not recognize current location so gives a fake one

What I did not do:
- I want to figure out an algorithm for choosing users and volunteers

What I plan to do over the next 2-4 weeks:
- Algorithm to match donors and volunteers
- Figure out how to have multiple markers on google maps with multiple peoples location
